

Beyond Description:

Using Schema.org to describe networks and actions in book, people, and discovery settings

American Library Association, Annual Meeting

“Understanding Schema.org” Session

Sponsors: ALCTS/LITA Metadata Standards Committee

June 29, 2014

Jason Clark

Head of Library Informatics & Computing

Montana State University Library

Abstract

At its core Schema.org is about creating machine-actionable descriptions of content. Librarians, especially cataloging librarians, have a unique understanding of the benefits of description at scale. What may be newer to our field are the additional expressions being brought into the Schema.org standard such as actions, roles, and linked data sameAs equivalencies. With the introduction of these expressions, opportunities for a more nuanced expression of identity and relationships in addition to basic description have been enabled. In this session, we'll look at some particular projects at Montana State University Library – an online web book (arc.lib.montana.edu/book/home-cooking-history-409/), a people directory application (www.lib.montana.edu/people/), and a digital collections search application (arc.lib.montana.edu/digital-collections/) – that are beginning to apply some of these additional Schema.org expressions to define relationships and linked data sources inside of web applications and web pages.

Introducing Semantic Markup

- HTML5 semantic tags and schema.org vocabularies that help classify page types and identify content on the page

“If Google understands the content on your pages, we can create rich snippets—detailed information intended to help users with specific queries.”

Coconut Cream Pie

Cooking Time: PT6H

Cooking Method: mix, refrigerate

Category: dessert

Cuisine Type: American

Servings: 8-12 servings

Related: [dbPedia entity](#)

Ingredients:

- 6 oz cream of coconut, such as Coco Lopez 10 oz mini marshmallows 1/4 cup milk 3 cups heavy cream 2 cups shredded coconut 2 tsp coconut extract

Directions:

1. Mix cream of coconut with milk, add the marshmallows and melt

marshmallows are melted.

2. Set mixture aside and let cool.
3. Once mixture is cooled/jelled put into kitchen aid mixer and whip until frothy like a latte.
4. Put mixture into another bowl.
5. Whip heavy cream till peaks form then fold into marshmallow mixture
6. Add 1 cup of coconut by hand make sure it doesn't clump up
7. Toast the other cup of coconut and set aside for garnish
8. Pour into cooked pie shells
9. Sprinkle toasted coconut on top
10. Refrigerate for at least 6 hours

```

Why Schema.org?

- Libraries as publishers in Web of Data
- Machines understanding our data =
Significance
- Can improve findability in search engines
(search engine optimization)
- Can create efficiencies in our own
indexing (e.g., digital collections search)

What is Linked Open Data?

- Practice of publishing structured, machine actionable data with an open license for sharing and reuse.

5 Star Linked Open Data

make your stuff available on the Web (whatever format) under an open license¹

make it available as structured data (e.g., Excel instead of image scan of a table)²

use non-proprietary formats (e.g., CSV instead of Excel)³

use URIs to denote things, so that people can point at your stuff⁴

link your data to other data to provide context⁵

Google Custom Search Engine JSON API Result

Getting Started

1. Think about entities you want to surface - type of web page, organization, person, etc.
2. Find those entities in schema.org vocabulary
3. Draft your new markup
 - a. Use Google Structure Data Markup Helper Tool
4. Test your markup in Google Structured Data Testing Tool
5. Publish it on the web.

Schema.org in Libraries
