

Search Engine Optimization for Libraries

"We cannot call a digital-library or electronic publishing system a success if we cannot measure and interpret its use."

- Peterson Bishop 1998

Research Team

- ❖ **Scott Young**
Digital Initiatives Librarian at Montana State University
- ❖ **Jason Clark**
Head of Library Informatics & Computing at Montana State University Library
- ❖ **Patrick O'Brien**
Semantic Web Research Director at Montana State University Library
- ❖ **Kenning Arlitsch**
Dean of the Library at Montana State University. His book, co-authored with Patrick O'Brien, is titled Improving the Visibility and Use of Digital Repositories through SEO, and was published in February 2013.

INSTITUTE *of*
Museum and **Library**
SERVICES

"Getting Found: Search Engine Optimization
for Digital Repositories"

Agenda - Day 4

- ❖ Semantic Web SEO
 - Using Semantic Web Practices for SEO
 - Web Development Practices and SEO
- ❖ Social Media Optimization (SMO)
- ❖ Resources
- ❖ Questions

Homework - Day 2

Institutional Setup & Identity

<https://docs.google.com/document/d/1HWVOkPn9UJXLeY3CV14cEPQKQtvgh6yA6T6uXK6-iAw/edit>

SEO Course Moodle instance

<http://www.classes.ala.org/course/view.php?id=537>

Homework - Day 3

Semantically Clarify Your Library & Define Your Site Index

https://docs.google.com/document/d/1wJqe5h6aS-Fc4KGB0aJSTpcMw3_GvjncitjujNFEgQ8/edit?usp=sharing

SEO Course Moodle instance

<http://www.classes.ala.org/course/view.php?id=537>

Recommendations & Priorities

1. Institutionalize SEO

- ◆ Strategic Plan
- ◆ Accurate Measurement Tools

2. Traditional SEO

- ◆ Get Indexed = Index Ratio
- ◆ Get Visible = Search Engine Results Page (SERP)

3. Semantic SEO

- ◆ Get Relevant = Click Through Ratios (CTR)
- ◆ Metadata
- ◆ Linked Open Data (LOD)
- ◆ Schema.org

Linked Open Data cloud diagram

What is Linked Open Data?

- Practice of publishing structured, machine actionable data with an open license for sharing and reuse.

Why use Linked Open Data?

- Source for disambiguation
- Provides machine definition of entity (a person, place, thing, subject, etc.) using a unique identifier (e.g., URL)
- Enables understanding vs. indexing of data

About: Library

An Entity of Type : [Thing](#), from Named Graph : <http://dbpedia.org>, within Data Space : [dbpedia.org](#)

A library (from French "librairie"; Latin "liber" = book) is an organized collection of information resources made accessible to a defined community for reference or borrowing. It provides physical or digital access to material, and may be a physical building or room, or a virtual space, or both.

Property	Value
dbpedia-owl:abstract	<ul style="list-style-type: none">A library (from French "librairie"; Latin "liber" = book) is an organized collection of information resources made accessible to a defined community for reference or borrowing. It provides physical or digital access to material, and may be a physical building or room, or a virtual space, or both. A library's collection can include books, periodicals, newspapers, manuscripts, films, maps, prints, documents, microform, CDs, cassettes, videotapes, DVDs, Blu-ray Discs, e-books, audiobooks, databases, and other formats. Libraries range in size from a few shelves of books to several million items. In Latin and Greek, the idea of bookcase is represented by Bibliotheca and Bibliothēkē : derivatives of these mean library in many modern languages, e.g. French bibliothèque. The first libraries consisted of archives of the earliest form of writing - the clay tablets in cuneiform script discovered in Sumer, some dating back to 2600 BC. These written archives mark the end of prehistory and the start of history. The earliest discovered private archives were kept at Ugarit. There is also evidence of libraries at Nippur about 1900 BC and at Nineveh about 700 BC showing a library classification system. Private or personal libraries made up of written books (as opposed to the state or institutional records kept in archives) appeared in classical Greece in the 5th century BC. In the 6th century, at the very close of the Classical period, the great libraries of the Mediterranean world remained those of Constantinople and Alexandria. From the 15th century in central and northern Italy, libraries of humanists and their enlightened patrons provided a nucleus around which an "academy" of scholars congregated in each Italian city of consequence. Tianyi Chamber, founded in 1561 by Fan Qin during the Ming Dynasty, is the oldest existing library in China. In its heyday it boasted a collection of 70,000 volumes of antique books. The first library classification system was set up during the Han Dynasty. In North America, it is believed that personal collections of books were brought over to the continent by French settlers in the 16th century. The oldest non-personal library on the North American continent was founded at The Jesuit College in Quebec City in 1635. The first textbook on library science was published 1808 by Martin Schrettinger. A library is organized for use and maintained by a public body, an institution, a corporation, or a private individual. Public and institutional collections and services may be intended for use by people who choose not to — or cannot afford to — purchase an extensive collection themselves, who need material no individual can reasonably be expected to have, or who require professional assistance with their research. In addition to providing materials, libraries also provide the services of librarians who are experts at finding and organizing information and at interpreting information needs. Libraries often provide quiet areas for studying, and they also often offer common areas to facilitate group study and collaboration. Libraries often provide public facilities for access to their electronic resources and the Internet. Modern libraries are increasingly being redefined as places to get unrestricted access to information in many formats and from many sources. They are extending services beyond the physical walls of a building, by providing material accessible by electronic means, and by providing the assistance of librarians in navigating and analyzing very large amounts of information with a variety of digital tools.

Design Expectations for LOD

1. Use URIs as names for things
2. Use HTTP URIs so that people can look up those names.
3. When someone looks up a URI, provide useful information, using the standards (RDF*, SPARQL)
4. Include links to other URIs so that they can discover more things.

- Tim Berners Lee

Expressing and Encoding LOD

The data model of RDF is based on the idea of a triple.

A triple is a simple statement with three distinct parts:

1. a subject
2. a predicate
3. an object

	A	B	C	D	E	F
1	Title	Author	Publisher	OCLC #	ISBN	Notes
2	This house of sky : landscapes of a Western mind	Ivan Doig	New York: Harcourt Brace Jovanovich, 1992.	25629631	0151900558	
3	To skin a cat : stories	Thomas McGuane	New York: Dutton/S. Lawrence, 1987.	15549047	0394755219	
4	Young men & fire	Norman Maclean	Chicago : University of Chicago Press, 1992.	283736539	0226500624	
5	A river runs through it, and other stories	Norman Maclean	Chicago: University of Chicago Press, 1976.	442266245	0671776975	Also a film version from Robert Redford http://en.wikipedia.org
6	The horse whisperer	Nicholas Evans	New York: Delacorte Press, 1995.	35722048	0440222656	
7	Hiking Yellowstone National Park	Bill Schneider	Helena, Mont: Falcon Press, 2003.	52500539	0762725397	2nd edition (Hiking Guide Series)

#5 “has author” Norman Maclean

(subject) (predicate) (object)

Design Expectations for LOD

1. Use URIs as names for things
2. Use HTTP URIs so that people can look up those names.
3. When someone looks up a URI, provide useful information, using the standards (RDF*, SPARQL)
4. Include links to other URIs so that they can discover more things.

Coordinating the social web with the semantic web

Topic

Montana State University Library^{en}**mid:** /m/0j3y9r1 **notable type:** /education/educational_institution **on the web:**  wikipedia.org

Montana State University Library is the academic library of Montana State University, Montana's land-grant university, in Bozeman, Montana. It is the flagship library for all of Montana State University System's campuses. In 1978, the library was named the Roland I. Libonati Library in honor of the university's president of the university. The library supports the research and information needs of Montana's students, faculty, and the public.

Telling Stories with Open Graph

Open Graph lets apps tell stories on Facebook through a structured, strongly typed API.

People use stories to share the things they're doing, the people they're doing them with and the places where they happen. Open Graph lets you integrate apps deeply into the Facebook experience, which increases engagement, distribution and growth.

Here's an example story from Goodreads:
